Stock Market Basics Course

Inside This Issue

- 1 Stock Market Basics
- 2 Message from the Presenter
- 2 Why the Stock Market
- 2 Discover Opportunities
- 3 Upcoming Events
- 3 Client Form

The purpose of a Stock Market Basics course is to introduce the concepts, uses and *tools for choosing shares* as an investment tool

You can create a relatively comfortable return on your investment using the stock market when compared to most other conventional assets. Historically speaking, the stock market, on average, *grows 20% per annum*.

The key to a **successful wealth creating investment** however, is knowing what to invest in & when best to participate. With the Stock Market Basics course *you learn skills* that build a foundation to develop your level of understanding using shares and stocks as the asset of choice!

Find out about stocks, the JSE, how Shares work, **how you can buy and sell** them, where to look for hot performers and hot tools!

Message from the Presenter

With over 11 years of stock market investing, I have worked hard at fine tuning skills that can fast track many people in their understanding and scope of what the stock market is, how it works and how to make profitable use out of it!

For employees, it provides a *better return than any other conventional asset* like property or a part-time business. For business owners, building a residual income over the years will literally pay you dividends from the stock market. Either way, you don't have to keep working when you retire unless it's FUN!

Saving is fantastic and not enough of the middle class put a plan in motion for retiring. Only **5 out of every 100** people will actually be able to retire comfortably...

If I can show you some basic ideas and methods to put into practice you can look at making at least **double the interest you earn in the bank!** My monthly newsletter has provided subscribers with over 20% on average so far this year alone!

Only
5 out of every 100
people retire
comfortably!

Are you a
Warren Buffett or a
George Soros?

Manage your own share portfolio by choosing the best performing sectors and the shares within them!

JUNE 2012

S	M	T	W	T	F	S
				31	1	2
3	4	5	6	7	8	9
10	11	12	13	14	15	16
17	18	19	20	21	22	23
24	25	26	27	28	29	30

Why the Stock Market?

Whether you are a Warren Buffett or a George Soros, by knowing your approach to money you can **make investment decisions** that better suit your style.

You can also use much of the content you learn to make business decisions or even personal finance decisions. The stock market is the barometer for money supply. If you can discover *tools to measure the supply of money* then you can make decisions based on this using the stock market.

We show you some easy models to follow when things get rough & tough and when they surge!

The number one reason the stock market should be used by anyone is that the returns are better than the bank! If I can show you **how to BEAT the Bank**, would you be interested?

Discover Investment Opportunities

Our Stock Market Course provides insight into investing with companies that you can hold for generating income or creating capital gain. The ultimate level of investing is being in a position of turning over capital with reasonable risk and above average return.

We cannot say that you get a guarantee on your investment. We do however show you how to minimize losses by choosing the best possible shares you can from the 100s of companies listed on the JSE.

Upcoming Events

Our upcoming events include the Stock Markets Basics course followed by the ALSI Apprentice Day Trading course. There is also the Personal Finance Course which features within the same week as the Stock Market Basics course. For more info on these events, please visit the Wealth Skills website now!

Personal Finance Course	June 7th
